

Kettenbach Dental, October 14, 2026
Press release

NO DRAMA in prophylaxis

PROFISIL® is THE modern protective varnish that offers benefits for practitioners and patients.

In prophylaxis, the effectiveness of a protective varnish is not the only thing that matters. Just as important is how easily the treatment can be integrated into everyday practice routines and how comfortable the experience is for patients.

This is exactly where the PROFISIL® family, PROFISIL® PLUS and PROFISIL® FREE combine modern protective concepts with enhanced patient comfort and simple, efficient application.

No burning. No bitter taste. No need to dry the teeth beforehand. Instead: controlled application, reliable adhesion, and transparent placement—for a treatment experience that puts patients at ease and supports efficient practice workflows.

Both products are based on a mucosa-friendly dimethicone formula and are intended to protect sensitive tooth surfaces by mechanically sealing the dentinal tubules. Both versions also have a low allergy potential.

What matters for dental assistants, preventive dental assistants, and dental hygienists: easy application, reliable control, satisfied patients

During a prophylaxis appointment, many individual steps need to work seamlessly together. A material that can be applied in a controlled manner simplifies the process for everyone involved: apply, allow to adhere, protect. This turns multiple individual steps into a relaxed, predictable workflow—fully in line with NO DRAMA in prophylaxis. At the same time, patient acceptance plays an important role: a pleasant mouthfeel makes the appointment easier for children as well as adults and older patients with sensitive teeth.

PLUS or FREE: always the right option for individual patient needs

PROFISIL® PLUS contains 5% sodium fluoride (22,600 ppm), as well as hydroxyapatite, calcium and phosphate. The dimethicone formula releases fluoride ions for up to 24 hours; hydroxyapatite, calcium, and phosphate also support tooth remineralization. PROFISIL® Fluoride Varnish PLUS is therefore designed for preventive care protocols in which fluoride is used selectively, and sensitive tooth surfaces require lasting protection. Available flavors include Mint, Berry, and Neutral.

PROFISIL® FREE offers a fluoride-free alternative based on hydroxyapatite, calcium and phosphate. This version is particularly suitable for patients whose individualized treatment plan deliberately excludes fluoride. The fundamental handling benefits of the PROFISIL® family remain unchanged.

For practitioners, this means greater flexibility: depending on the preventive care objective, patient preference, and individual indication, they can choose between a fluoride-containing and a fluoride-free option—without sacrificing the familiar application comfort of PROFISIL®.

About Kettenbach Dental

As an internationally oriented family business based in Eschenburg, Germany, Kettenbach Dental has been developing value-adding innovations for dental health "made in Germany" since its founding.

From prophylaxis and impression taking to temporary and definitive restorations, Kettenbach Dental develops smart solutions that intelligently simplify the workflows of dentists and dental laboratories: Simply intelligent.
