

# Efficiency Without Compromise

*From prophy workhorses to precision instruments, the ACCLEAN Clean & Polish family delivers ergonomic design, consistent power, and clinician-approved reliability.*

**E**very hygiene appointment depends on fundamentals: efficient stain removal, reliable scaling, clear visibility, and instruments that protect clinicians from fatigue. The Clean & Polish family from ACCLEAN was developed with that reality in mind.

Designed in collaboration with hygienists and refined through clinical feedback, the portfolio includes cordless and corded hygiene handpieces, disposable prophy angles, prophy pastes, ultrasonic scalers and inserts, diagnostic instruments, and hand scalers and curettes. Together, they form a coordinated system built for performance, ergonomics, and value.

And according to clinicians who use them daily, the consistency shows.

## ERGONOMICS MEETS POWER

The ACCLEAN Cordless Hygiene Handpiece eliminates cord drag and awkward positioning while delivering industry-leading power. With a brushless motor, 6 speed settings, and high-output torque to remove tough stains and maintain speed under pressure, the handpiece is designed to reduce strain and enhance ease of use. An optional wireless foot pedal offers hands-free speed control. The removable, autoclavable nose cone enhances infection control, and the unit works with virtually all universal disposable prophy angles.

For Samantha Cosgrove, RDH, who participated in a review

**“The coarse prophy paste works really well. I don’t have to press too hard to remove some of that tough surface stain...I know it’s going to do what it says it’s going to do—remove stain, remove plaque.”**

**Dana Jones, RDH**

of the ACCLEAN Cordless Hygiene Handpiece, the system was easy to set up and use, and solved an ergonomic challenge. “The cordless feature allowed me to have less hand and wrist fatigue and better overall ergonomics,” she said.

## DAILY DURABILITY

The ACCLEAN Hygiene Handpiece 2 delivers stainless-steel durability with excellent torque that provides responsive, smooth operation throughout the speed range. The autoclavable handpiece is easily maintained with a simple and highly efficient no-lube motor.

Hygienist Donna Grzegorek has used the handpiece for six years.

“It is lightweight yet very powerful and displays no vibration,” she said, adding that it has improved torque and smoother operation over other handpieces she has used. “The handpiece is very comfortable in my hand, and I experience no hand fatigue.”

## COMPACT, PREDICTABLE PROPHY ANGLES

ACCLEAN Disposable Prophylaxis Angles provide ergonomic and design enhancements to improve clinical outcomes. Available in a variety of configurations, the prophylaxis angles are not made with rubber latex and feature a grip designed for overall control and tactile sensitivity.

"I have never had an ACCLEAN disposable prophylaxis angle stall, which is remarkable and preferred by all clinicians as minutes matter in our appointment sequence," Grzegorek said. "I like the performance, predictability, and choice of styles of this product. Patients never complain of feeling overstimulated by this polishing angle."

Amber Metro-Sanchez, RDH, BA, also highlighted performance, calling it "consistently reliable" and lauding its splatter control.

The disposable prophylaxis angles feature color-coded body and cup types for easy identification and organization.

"Too many prophylaxis angles use unnecessarily large packaging," Metro-Sanchez said. "I like how the packaging for the ACCLEAN prophylaxis angle is smaller and more earth-friendly. For a lower-priced prophylaxis angle, I'm very impressed with its overall quality."

## Clearer Fields, Greater Efficiency

High-volume evacuation plays a critical role in modern hygiene appointments by supporting visibility, isolation, patient comfort, and aerosol management. The ACCLEAN Hands-Free High Volume Evacuation (HVE) device was designed to simplify all of the above.

Engineered for evacuation, isolation, and retraction, the device maintains a dry field with a 280° suction design and provides an unobstructed view of the oral cavity. The leaf-shaped mouthpiece, made from a soft, custom-blended polymer, enhances patient comfort. The BPA-free device is available in universal standard and mini sizes to accommodate different patient needs.

"The ACCLEAN Hands-Free HVE is probably the best hands-free device that I have used so far," said Heather Locker, RDH, who has used numerous hands-free evacuators during her career. "It is very easy to place in the patient's mouth, and my patients have told me it's very comfortable."

The device, which sets up quickly and integrates easily with existing HVE systems, helps hygiene teams work more efficiently while keeping patients at ease.

## CLEANING WITH REMINERALIZATION

ACCLEAN Prophylaxis Paste with TCP combines 1.23% fluoride ion with tricalcium phosphate to deliver strong stain removal while supporting remineralization.\* Offered in fine, medium, coarse, and extra-coarse grits—as well as a large selection of flavors—the gluten-free paste is packaged in convenient unit-dose cups with easy-open foil lids.

"I prefer using a polishing paste with TCP as it enhances remineralization of the tooth surface, prevents demineralization, and supports the education I provide to my patients about remineralization and demineralization," Grzegorek said.

Noting that the product is "known for its excellent stain removal and polishing performance," Grzegorek said she treats many patients who present with heavy, tenacious stain.

"I have no difficulty removing that

heavy stain with one of the many choices of grit," she said.

Hygienists have lauded the product for its efficiency—with Grzegorek affirming that it does not splatter—as well as its patient-pleasing qualities.

The prophylaxis paste also is available without TCP, which Jessica Raymond-Allbritten, BASDH, CRDH, often uses.

"We have ACCLEAN Prophylaxis Paste in the different flavors, including raspberry and cherry. I like the flavor," she said. "Overall, it's easy to work with, and kids like it."

Treating patients at MIT Health, Dana Jones, RDH, relies on ACCLEAN Prophylaxis Paste in a coarse grit for heavy coffee and tea stain. "The coarse prophylaxis paste works really well. I don't have to press too hard to remove some of that tough surface stain," she said. "I know it's going to do what it says it's going to do—remove stain, remove plaque."

\*Studies suggest that supplementing fluoride with TCP enhances remineralization and produces stronger, more acid-resistant minerals than fluoride alone.

ACCLEAN also offers a fluoride-free, unflavored prophy paste without color, which is well suited for patients with sensitivities.

### POWERFUL ULTRASONIC SCALING

The ACCLEAN Ultrasonic Scaler features dual-frequency technology, accepting 25K and 30K inserts, with automatic insert detection. The auto-gain control ensures consistent power throughout procedures, and the boost and cruise control modes help clinicians deal with difficult deposits on demand and reduce strain caused by continuous pedal usage.

“My favorite aspect of the ACCLEAN Ultrasonic Scaler is the cruise control mode,” said Denisse Gomez, DMD. “Not having to constantly press on the pedal definitely helps with fatigue.”

Hygiene clinical instructor Cheri Lindstrom, BSDH, initially assumed the ACCLEAN Ultrasonic Scaler might underperform due to its compact size. She expected the system, which weighs just 1.3 pounds, to lack the power and efficiency of the heavier, more familiar ultrasonic units. To her surprise, the portable unit exceeded expectations.

“Patients experience more efficient calculus removal thanks

to this easy-to-use, powerful, and compact ultrasonic system,” she said. “Other ultrasonic units do not have the power that the ACCLEAN scaler has on its lower settings.”

### TACKLE STUBBORN CALCULUS

The redesigned ACCLEAN Ultrasonic Inserts feature enhanced stainless-steel tip composition for improved wear-resistance and through-tip water delivery to improve visibility and minimize excess spray. Ergonomic, color-coded resin or silicone handles enhance grip and comfort.

“ACCLEAN Ultrasonic Inserts have a thin tip design with a unique bend that I haven’t seen in other tips, making it easier to fit into tight interproximal spaces,” Dr. Gomez said. “I can remove even the most tenacious of calculus with minimal effort.”

### ACCURACY WITH COMFORT

ACCLEAN Diagnostic Instruments feature textured handles and optimized grip for enhanced control and precision during diagnostics. Precision-formed,

hand-sharpened tips and etched probe markings support accurate periodontal assessment, while stainless-steel construction ensures long-term durability. The assortment includes an explorer, probes, expros, and mirrors.

“The texture and size of the handles eliminated most, if not all, of my hand fatigue,” said hygienist Donna Shewbert.

### SHARP, LIGHTWEIGHT INSTRUMENTS

The double-end, stainless-steel ACCLEAN Curettes and Scalers feature a lightweight construction and an ergonomic design to minimize hand fatigue. The handle etching helps keep the user’s hand in place, while grip rings prevent the instrument from slipping.

Tessa Simpson, RDH, found the scalers very comfortable to use. “They are lightweight instruments with a larger handle, which allows the dental clinician to use a lighter grasp while working,” she said.

The durable instruments maintain a long-lasting, sharp edge, with an uncoated design that makes it possible to resharpen for prolonged use.

### EFFICIENT & RELIABLE

The ACCLEAN Clean & Polish family is designed for the daily demands of preventive care: efficiency, ergonomics, visibility, and predictable results. Reliable tools don’t just improve procedures—they enhance the entire patient experience.

# LET US TAKE THE HASSLE OUT OF YOUR HYGIENE JOB SEARCH

**DirectDental makes it easier** than ever **to connect** with dental practices seeking temporary and permanent **hygiene team members—LIKE YOU!**

**Build your professional online resume:** Offices can request you for temp shifts or invite you to apply.

**No placement fees:** Unlike an agency, practices can hire you directly with no extra fees.

**Access flexible options:** Single shifts, recurring temp work, and permanent placements.
