DEXIS Unveils Portfolio-Wide Innovations That Advance Its Connected Imaging Ecosystem

Continuous innovation across the DEXIS ecosystem helps clinicians work with greater clarity, confidence, and efficiency

Quakertown, PA (September 23, 2026) – DEXIS™, a global leader in dental imaging, intraoral scanning, and diagnostic software, today unveiled a coordinated wave of innovations across its connected ecosystem. Spanning hardware, software, cloud, education, and services, this portfolio advancement reflects DEXIS' commitment to help clinicians work with greater clarity, confidence, and efficiency throughout the imaging workflow. As a longtime trusted brand uniting 2D and 3D imaging, intraoral scanning, and diagnostic software within a connected, AI-powered ecosystem, DEXIS continues to expand technologies that support confident clinical decision-making.

“At DEXIS, we're continuously looking for ways to help our customers get more value from the technologies that they use every day. These innovations build on the solutions clinicians already trust, bringing new capabilities across our portfolio that support more efficient workflows and confident clinical decisions,” said Robert Befidi, President of DEXIS. “Each of these advancements solves a different challenge for our customers. Combined, they help clinicians see more clearly and get more value from the technologies they use every day to improve clinical outcomes for their patients.”

Together, these innovations span every stage of the imaging workflow, from image capture and diagnostics to collaboration, education, and ongoing practice support. Starting with the newest development within DEXIS imaging hardware, the **NOMAD™ Pro 3** builds on the handheld X-ray system that defined the category, delivering improved image quality, enhanced durability, and a continued commitment to safety-first engineering. Meanwhile, the **ORTHOPANTOMOGRAPH™ OP 3D™** Motion Correction feature helps clinicians obtain clearer, more diagnostically useful CBCT images by reducing the impact of patient movement without requiring any hardware updates.

DEXIS also continues to advance the intraoral scanning workflow, with optimizations that increase precision, accessibility, and clinical confidence. The latest version of **IS ScanFlow** introduces the **SEAT Protocol**, which guides scanbody-based implant workflows, helping improve alignment and image accuracy across full-arch and multi-unit restorations. A new **DEXIS Imprevo™ slim tip** further expands scanning access and maneuverability in challenging anatomies, helping clinicians navigate tight spaces, posterior regions, and limited-opening patients. Looking ahead, these enhancements will continue to evolve with greater data and image quality improvements to support more complex cases.

Beyond scanning, DEXIS continues to develop diagnostic visualization and treatment planning through software innovation. The latest version of **DTX Studio™ Clinic (v4.10)** introduces a new Endodontic Module that provides clinicians with a deeper visualization of root canal anatomy before treatment begins. When paired with CBCT, the module enables users to segment and visualize canals in 3D, helping endodontic specialists and general practitioners identify anatomy more clearly, navigate canal complexity with greater confidence, and make more informed procedural and referral decisions.

Extending DEXIS' vision for connected, cloud-enabled dentistry, **DEXIS IOS Cloud**, formerly IS Connect, marks the next step in the company's cloud strategy. Featuring an updated user experience and new 3Shape lab integration, the cloud-based collaboration platform provides clinicians and laboratory partners with more flexible access to scanning workflows and data. The launch reflects

DEXIS' continued investment in cloud technologies designed to simplify clinician and laboratory collaboration, streamline workflows, and support a more connected digital experience.

Complementing these innovations, new **Hardware-as-a-Service** models provide practices with flexible options that include predictable monthly pricing, built-in protection, and upgrade pathways that help keep technology current over time.

Beyond technology, DEXIS is expanding how it helps customers adopt, optimize, and get more value from their digital dentistry technology. **DEXIS Academy** serves as the company's flagship education platform, bringing together training experiences, on-demand content, workflow-based learning, and opportunities for peer engagement in a single destination designed to help users build confidence and maximize the capabilities of their DEXIS solutions.

Supporting its commitment to an open ecosystem, DEXIS is also expanding integrations with Asiga, 3Shape, and SmileGrid. These collaborations help extend connectivity across digital workflows and provide customers with greater flexibility across the technologies they use every day.

DEXIS unveiled these innovations during its ILLUMINATE virtual keynote, where company leaders shared updates from across the portfolio and discussed the company's vision for continued innovation across imaging, software, cloud, education, and services. The webcast is available on demand at DEXIS.com/ILLUMINATE.

About DEXIS

DEXIS, part of the Envista family of brands, is a global leader in dental imaging, uniting the industry's most trusted brands across 2D and 3D imaging, intraoral scanning, and diagnostic software within a single, connected, AI-powered ecosystem. Our innovative and award-winning technologies are designed with smart simplicity to streamline workflows, enhance diagnostic precision, increase productivity, and support better patient outcomes. By unifying imaging and diagnostic tools under one brand, DEXIS empowers dental professionals to diagnose with greater confidence and deliver more efficient care with one connected ecosystem - built on choice.
